Lohrman's Market Garden Varieties
Cauliflower, Lohrman's Snowcap

Snowcap is a decided improvement over Snowball. This variety is of robust growth and has enough vitality to resist unfavorable conditions. In spite of a setback during the growing season, it will continue to grow and form mature heads. Green leaves do not grow up through the heads. The inner leaves perfectly protect the head until nearly fully grown—thereby eliminating early tying.

The heads are entirely free of the richness and fuzziness found in most cauliflower. It has a deeper head, finer curd and is heavier than Snowball. Every progressive grower should give Snowcap a trial.

They bear their flowers on stout stems well above water, are very free flowering, and may be used as cut flowers. (Flowers open and close each day). Lohrman's Evergreen Lawn Seed

The above mixture is made from our own formula, and composed of grasses specially adapted for the purpose of producing turf which retains its rich green color and velvety appearance throughout the entire summer and fall. In making up this high grade mixture we are careful to use only the very finest quality of all the most desirable dwarf, evergreen, **re-cleaned** grasses, free from chaff and weeds, which thrive well on any soil, thus ensuring a beautiful and permanent lawn. Lb., 50c; 3 lbs., \$1.45; 5 lbs., \$2.40; 10 lbs., \$4.50; 25 lbs., \$10.00; 100 lbs., \$40.00.

How to Make a Lawn With Evergreen Lawn Seed

Preparation of Soil. Dig the soil about 6 inches deep, but only when it is dry. Rake until soil is smooth and in fine condition.

Fertilizing. Use complete **Plant Food**, an odorless fertilizer, at the rate of one-half ton per acre, 50 lbs. per 1000 square feet, 5 lbs. per 100 square feet.

Sowing the Seed. Sow our **Evergreen Lawn Seed** at the minimum rate of 100 lbs. per acre or 1 lb. to each 300 square feet. Bury the seed not more than one-eighth inch deep. Roll the seeded area, but should rain fall before the work is completed, defer the rolling until the land has dried.

Grass for Shady Locations. Follow the above directions but use our **Shady Lawn** instead of our **Evergreen Lawn Seed**.

Renovating an Old Lawn. First—Rake the lawn well, removing as much dead grass as possible. Second—Apply fertilizer according to the above directions. Third—Sow our **Evergreen Lawn Seed** at the rate of 50 lbs. per acre or 1 lb. per 600 square feet. Fourth—Either rake the lawn lightly or roll it in order to cover the seed.

Lohrman's Fairway Mixture

This special mixture produces beautiful and permanent lawns. It is made from our own formula, and composed of grasses which are adapted for the purpose of producing turf which retains its rich green color and velvety appearance throughout the entire summer and fall. This mixture does not contain any clover. In making up this brand we are careful to use only seed that has been thoroughly re-cleaned. Sow 1 pound to 300 square feet. Lb., 50c; 3 lbs., \$1.45; 5 lbs., \$2.40; 10 lbs., \$4.50; 25 lbs., \$10.00; 100 lbs., \$40.00.

Shady Place Mixture

This is a mixture of extra-fine grasses adapted for growing in the shade and under trees. We recommend the use of this mixture wherever other grasses have failed to make a close sward on account of shade. To obtain the best results, the seed should be sown very early in spring. In most shady places the soil has a tendency to be sour, and we suggest the use of Land Lime at the rate of about 100 pounds to each 2,000 square feet to sweeten it. Sow at the rate of 1 pound per 200 square feet for a new lawn, or about half that quantity for renovating existing turf. Lb., 60c; 3 lbs., \$1.75; 5 lbs., \$2.85; 10 lbs., \$5.50; 25 lbs., \$12.50; 100 lbs., \$50.00.

Kentucky Blue Grass

We recommend this hardy sort as the best grass for lawn purposes. It is slightly creeping in habit and grows most extensively in the early summer. Lb., 55c; 3 lbs., \$1.60; 5 lbs., \$2.60; 10 lbs., \$5.00; 25 lbs., \$11.25; 100 lbs., \$45.00.

It gains maximum development in early fall. Succeeds in all soils. One pound to 300 square feet. Lb., 35c; 3 lbs., \$1.00; 5 lbs., \$1.65; 10 lbs., \$3.25; 25 lbs., \$6.75; 100 lbs., \$27.00.

White Dutch Clover for Lawns

This is of particular value in lawn mixtures, and will grow on almost any kind of soil. Being very hardy and of creeping habit, it will also prevent the ground from being washed away by heavy rains. Sow 1 pound to 600 square feet with other grasses. Lb., 60c; 3 lbs., \$1.75; 5 lbs., \$2.85; 10 lbs., \$5.50; 25 lbs., \$12.50; 100 lbs., \$50.00.

Chewings Fescue

Used extensively for golf courses, and is one of the best grasses for this purpose, as it is creeping in habit and soon forms a solid, compact turf. Valuable for terraces or exposed hillsides. Does well on thin or poor soils and is extremely resistant to drought. Sow 1 pound to 300 square feet. Lb., \$1.00; 5 lbs., \$4.85; 10 lbs., \$9.50; 25 lbs., \$20.00; 100 lbs., \$80.00.

Poa Trivialis Grass

An ideal shade grass, and is a perennial closely related to Kentucky Blue Grass, but somewhat finer and softer. It has a splendid apple-green color and is a creeper. Sow in fall or spring at rate of 1 pound to every 300 square feet. Lb., 50c; 3 lbs., \$1.45; 5 lbs., \$2.40; 10 lbs., \$4.50; 25 lbs., \$10.00; 100 lbs., \$40.00.

Lohrman's Superior Bent Grass Mixture

This mixture is composed of Bent Grass with other rapid growing grasses that act as a shelter crop. Sow 1 pound to 200 square feet. Lb., 95c; 3 lbs., \$2.80; 5 lbs., \$4.50; 10 lbs., \$8.75; 25 lbs., \$21.25; 100 lbs., \$85.00.
